Laurenco Waterproofing System Resistance to Ponding Water & Zero Slope (Dead Flat) Applications

Laurenco Waterproofing products are designed for optimum application performance in a wide array of environments. One major benefit to the Laurenco Waterproofing Systems is their ability to be installed on “dead flat” or “zero slope” surfaces. Ponding water as well as complete submersion has no deleterious effects on the Laurenco Waterproofing Systems when properly installed.

Although the Laurenco Waterproofing System can be installed in areas of zero slope, it is the responsibility of the Design Professional of record to verify this installation is acceptable with the local building officials having jurisdiction.

Should you have any questions or comments please do not hesitate to contact Laurenco’s Technical Departments directly.
